Installation

The software works on any modern day personal computer, with necessary permissions to read and write files.

➤ Setup files

Download the software from our website : <http://www.g00.in> .

Then, double click on the downloaded file and follow the instructions that appear on your screen.

➤ Redistributable Files

In most cases, you will be able to launch the software immediately after installation.

However, if your computer does not have the redistributable files required for running the software, you may need to download the zip file : <http://www.g00.in/vcredist.zip> , unzip the contents and double click on the relevant installation file (32 bit or 64 bit) to install it on your computer.
